

Mast Tilt Angle Indicator

Incorrect mast tilt angle position being the most important factor in edge damage, Canadian Flexible T.M. Inc. has developed a simple solution to that problem.

Our mechanical mast tilt angle indicator is a **precise, maintenance-free device**, which requires no additional operation from the driver and is meant for handling operations of any type of loads.

Pressure Tester

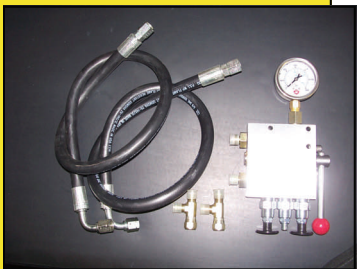

Our tester enables **easy and accurate monitoring of the pressure force** of any type of lift truck clamping attachment. Regular pressure testing reduces damage to cargo, due to over or under clamping.

Our pressure tester is mounted on four (4) heavy duty pivot wheels that rotate to 180°, which makes it easier to move it around. A large analog display gives a clear reading of the pressure

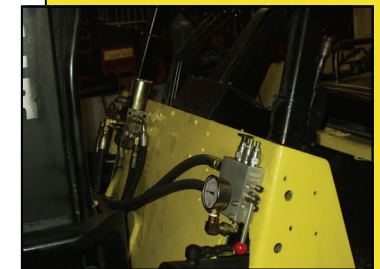

Manual Pressure Regulator

Our kit is delivered with all the components needed to mount it onto your lift truck, including:

- A main hydraulic block with adjustable relief valves for each position (**3 or more pressure settings** + lift truck's pressure).
- A red knob handle which allows easy manual switching between positions.
- For installation: a pressure gauge with an adaptor, two (2) T-connectors, two (2) hydraulic hoses, two (2) fittings to connect the hoses to the hydraulic block, ...
